

BRAIN|BODY|MIND

The NeuroWay By Seb Kane

## Case Studies

**Name:** George Jeffrey

**Age:** 4

**How it started..**

- Poor emotional regulation
- Co-ordination issues
- Slight speech delay
- Obsessive behaviour towards friends
- Teeth grinding

**How is it going?**

Exercise Programme delivered to Integrate, Spinal Gallant, Moro, ATNR, Rooting and Palmer reflexes.

**The improvements**

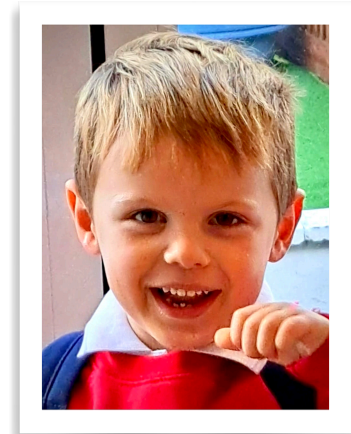

- Huge improvement in emotional balance
- Co-ordination and stability work improving
- Healthier friendships occurring at school
- Much improved speech
- Teeth grinding

**Thank you EVO...**

"Having heard about Evo and their work around Primitive Reflexes, my husband and I arranged an assessment. Our beautiful little boy is just perfect in so many ways, however, there were a few little things around his behaviours that was making us feel a little concerned. The assessment was eye opening to say the least, hearing about Primitive Reflexes, what they are, the role they play in brain development and the issues they cause if not integrated is just staggering. George had a number of reflexes still active and was given an exercise movement programme to integrate the reflexes. As he started to improve the movements patterns, we began to see subtle changes in Georges behaviours".

"Truly astonishing, we will continue with the exercise and watch our boy flourish"
